

Ipswich Mosque

Website User Manual

With complete reference to the Admin Panel

Applies to: ipswichmosque.org

Audience: Mosque administrators, content editors, committee members

Document type: End-user manual

Contents

1. **Introduction** — what this manual covers
2. **Getting Started** — logging in and finding your way around
3. **Admin Panel Overview** — the dashboard and navigation map
4. **Communications** — Notice Board, Newsletter
5. **Content Management** — Khutbah Videos, Pages and Page Builder, Carousel, Prayer Times, Quick Links, Menu Management
6. **Courses and Events** — Courses, Events, Ramadan
7. **Religious Content** — Jummah, Duas, Dua Categories
8. **Services** — Marriage Bookings, Funeral Bookings, Janazah Content, Emergency Contacts
9. **Management** — Contact Messages, People Directory, Donations, Gift Aid
10. **Administration** — Admin Users, Mosque Settings, Stripe Settings
11. **The Public Website** — what visitors see and where content appears
12. **Troubleshooting and FAQ**
13. **Appendix** — reference tables and publishing checklist

1. Introduction

1.1 What this manual covers

This manual explains how to manage every part of the Ipswich Mosque website through the **Admin Panel**. It is written for non-technical users: committee members, the mosque administrator, and anyone responsible for keeping website content current.

The Admin Panel lets you control nearly everything visitors see, including prayer times, Friday (Jummah) timings, announcements, sermon videos, Ramadan information, donation settings, marriage and funeral service requests, and the site's main navigation menu.

1.2 How to use this manual

Sections 4 through 10 follow the Admin Panel's own navigation groups, so you can read the chapter that matches the sidebar item you have clicked. Each module section follows the same structure:

- **Where to find it** — the sidebar location and web address.
- **What it does** — the purpose of the module and where its content appears publicly.
- **Adding and editing records** — every form field, marked **required** where the system will not save without it.
- **Notes and warnings** — behaviours that are easy to get wrong.

You do not need to read the manual cover to cover. Use the Contents list, or jump straight to the module you need.

1.3 Conventions used

Notation	Meaning
Field *	A required field. The form cannot be saved until it is filled in.
<code>/admin/notices</code>	A web address you can type into the browser address bar.
<code>code text</code>	A value, setting name or option exactly as it appears on screen.
Bold	A button, link, tab or label you click or look for on screen.

Important — before you start Changes made in the Admin Panel are **live immediately** for most modules. There is generally no separate "publish to website" step once you save, except where a module has an explicit **Published** or **Active** toggle (noted in each section). Take care when editing content that visitors currently rely on, such as prayer times.

1.4 What you will need

- A modern web browser: Chrome, Edge, Firefox or Safari (current version).
- An administrator account (email address and password) issued by the mosque.
- A stable internet connection.
- For modules involving images: photo files in JPG or PNG format.

No software needs to be installed on your computer. Everything is done in the browser.

2. Getting Started

2.1 Logging in

1. In your browser, go to ipswichmosque.org/login.
2. Enter your **Email** address and **Password**.
3. Optionally tick **Remember me** to stay signed in on this computer. Only do this on a private machine that no one else uses.
4. Click **Log in**.

You will be taken to the Admin Panel dashboard at `/admin`.

Shared computers If you are using a mosque office computer that several people use, do **not** tick **Remember me**, and always log out when you finish (see 2.4).

2.2 If you forget your password

1. On the login page, click **Forgot your password?**
2. Enter the email address registered to your admin account.
3. Check that inbox for a password reset link and follow it to choose a new password.

If the reset email does not arrive, ask another administrator to reset your password for you from **Admin Users** (see section 10.1) — that screen has a dedicated password-reset action.

2.3 Your first look around

After logging in you will see the **Admin Panel** dashboard. It has two ways of reaching the same places:

- **The sidebar on the left** — grouped navigation, always visible. This is the fastest way to work.
- **The dashboard cards** — large clickable tiles grouped under headings such as Communications, Content Management and Services Management. Useful while you are still learning where things live.

Both lead to exactly the same screens. Most people settle on the sidebar once they know the layout.

2.4 Logging out

Use the account menu at the top right of the Admin Panel and choose **Log out**. Always log out on shared computers.

2.5 Standard screens you will meet everywhere

Almost every module works the same way, so once you learn one you know most of them:

Screen	What you do there
List (index)	Shows all existing records in a table. Contains the Add / Create button, plus Edit and Delete links on each row. Many lists also have a search box and filters.
Create	A blank form for a new record. Fill in the fields and click the save button.
Edit	The same form, pre-filled with the existing record. Change what you need and save.
Show	A read-only detail view. Used for enquiries such as marriage, funeral and contact messages, where the record was created by a member of the public rather than by you.

Deleting is permanent Delete actions ask for confirmation before they run. Once confirmed, the record is gone and cannot be recovered from the Admin Panel. If you want something hidden but not lost, use its **Active / Published** toggle instead of deleting it.

2.6 Validation messages

If you submit a form with a missing or invalid field, the page reloads and shows a red message under the offending field, for example *"The title field is required."* Your other entries are kept — correct the highlighted field and submit again.

The most common causes are: leaving a **required** field blank, entering an email address without an @, entering a web address without `https://`, or uploading a file in an unsupported format.

3. Admin Panel Overview

3.1 The dashboard

The dashboard (`/admin`) opens with a green welcome banner reading **Ipswich Mosque Admin Panel — Manage all mosque content and services**. Below it, clickable tiles are grouped into sections. It also shows live counters, including the number of khutbah videos that are publicly visible, pending service requests, recent requests, and total donations.

At the bottom of the dashboard a summary reminds you of the three broad responsibilities: **Content** (videos, pages, images), **Services** (bookings, messages) and **Management** (users, settings).

3.2 Complete sidebar navigation map

This is the master reference for the whole panel. Every sidebar group and item is listed here with the chapter that explains it.

Sidebar group	Sidebar item	Section	What it controls
Main	Admin Home	3	The dashboard itself
	Khutbah Videos	5.1	Friday sermon videos from YouTube
Content	Prayer Times	5.4	Daily prayer timetable by month
	Pages	5.2	Website pages and the Page Builder
	Carousel	5.3	Homepage slideshow images
	Courses	6.1	Course sections shown on the site
Courses & Events	Events	6.2	Upcoming events listing
	Ramadan	6.3	Ramadan hub: timings, iftar, events
	Jummah	7.1	Friday khutbah and salah times
Religious	Duas	7.2	Supplication library
	Duas Category	7.3	Grouping for the dua library
Services	Marriage Bookings	8.1	Nikah ceremony enquiries

Management	Funeral Bookings	8.2	Janazah service requests
	Janazah Content	8.3	Funeral guidance page content
	Emergency Contacts	8.4	Committee contact list
	Contacts	9.1	Contact form messages
	People	9.2	Committee and team directory
	Donations	9.3	Donation records and statistics
	Gift Aid	9.4	HMRC Gift Aid declarations
Settings	Mosque Settings	10.2	Mosque name, address, bank details, logo
	Stripe Settings	10.3	Online payment gateway keys
	Admin Users	10.1	Who can access the panel

Items reachable only from the dashboard A few modules are not in the sidebar but are available as tiles on the dashboard: **Notice Board** (section 4.1), **Newsletter** (4.2) and **Quick Links** (5.5). **Menu Management** appears in the sidebar and is covered in section 5.6. If you cannot find something in the sidebar, check the dashboard tiles.

3.3 Typical daily and weekly tasks

Task	Go to	Frequency
Check for new marriage or funeral enquiries	Services > Marriage Bookings / Funeral Bookings	Daily
Reply to contact form messages	Management > Contacts	Daily
Post an announcement	Communications > Notice Board	As needed
Update next month's prayer timetable	Content > Prayer Times	Monthly
Update Friday timings for a new period	Religious > Jummah	As scheduled
Add a recorded sermon	Content > Khutbah Videos	Weekly

Review donations and Gift Aid	Management > Donations / Gift Aid	Monthly
Send a newsletter	Communications > Newsletter	As needed

3.4 Who should have access

Every account in the Admin Panel is a full administrator: there is no restricted or read-only role. Anyone who can log in can change prayer times, publish announcements, view donor personal data and manage payments. Keep the number of accounts small, issue accounts only to trusted committee members, and remove accounts when someone leaves their role (section 10.1).

Personal data Contact messages, marriage and funeral bookings, donations and Gift Aid declarations all contain personal data belonging to members of the public — names, addresses, phone numbers, email addresses and financial information. Only access these when you need to, do not export them unnecessarily, and never share exported files by unsecured email.

4. Communications

4.1 Notice Board

Where to find it: Dashboard > Communications > **Notice Board** • </admin/notices>

What it does: Posts announcements that appear on the public Notice Board page (</notices>) and, when published, can be emailed to newsletter subscribers.

Notice fields

Field	Guidance
Title *	The headline shown on the notice card. Keep it short and specific, for example "Parking restrictions during Eid prayers".
Category *	Choose one: <code>General</code> , <code>Prayer</code> , <code>Event</code> , <code>Announcement</code> , <code>Urgent</code> . The category sets the colour of the badge shown on the notice — urgent shows red, event blue, prayer green, announcement purple, general grey.
Image	Optional photo shown at the top of the notice. JPG or PNG.
Summary	Optional one or two sentence teaser shown on the listing page. If left blank, the system automatically uses the first 200 characters of the content instead — so write a summary when you want control over how the notice reads in the list.
Content *	The full notice, written in the rich text editor. You can bold text, create bullet and numbered lists, add links and insert images.
Publish Date	When the notice becomes visible. Leave blank to make it visible immediately. Set a future date to schedule a notice in advance.
Expiry Date	When the notice stops showing. Useful for time-limited information so old notices retire themselves.

Useful notice behaviours

- **Pinning** — the list screen has a pin toggle. Pinned notices appear at the top of the public listing with a pin marker, regardless of their date. Use sparingly: if everything is pinned, nothing is.
- **Active toggle** — a notice can be switched off without deleting it.

- **View count** — the system counts how many times each notice has been opened.
- **Emailing subscribers** — publishing a notice can send it to all active newsletter subscribers as a "New Notice from Ipswich Mosque" email. See the warning below.

Notices go to every subscriber at once When a notice is emailed, it is sent individually to **every active newsletter subscriber** in one operation. There is no test or preview send, and it cannot be recalled. Check the title, category and content carefully before publishing, and consider publishing without the email option for minor updates.

4.2 Newsletter

Where to find it: Dashboard > Communications > **Newsletter** • </admin/newsletter>

What it does: Two jobs in one screen — managing the subscriber list, and composing and sending newsletter emails.

The screen

- **Subscriber list** — a paginated table of everyone who has signed up, showing name, email and subscription status. There is a total subscriber count at the top.
- **Search** — filter the list by name or email address.
- **Status filter** — show only **active** subscribers or unsubscribed ones.
- **Recent newsletters** — the ten most recently sent newsletters with their send counts.
- **Export** — download the active subscriber list as a CSV file (columns: Name, Email, Subscribed At).

Sending a newsletter

Field	Guidance
Subject *	The email subject line. Maximum 255 characters. This is what subscribers see in their inbox, so make it informative.
Content *	The body of the email, written in the rich text editor.
Notice	Optional. Attach one of the ten most recent active notices to the email; it is included in the newsletter body.

On sending, the system emails every active subscriber one at a time and reports the outcome, for example *"Newsletter sent! 148 delivered, 2 failed."* Failed addresses are logged rather than stopping the send. A record of the newsletter is stored and becomes visible in the public

newsletter archive.

Who receives newsletters

Only subscribers whose status is **active**. People who have used the unsubscribe link in a previous email are excluded automatically. Every newsletter includes a personal unsubscribe link and states the address it was sent to.

Newsletters come from a no-reply address Newsletter and notice emails are sent from **no-reply@ipswichmosque.org** with the display name **Ipswich Mosque**.

Because that mailbox is not monitored, replies are routed to the main admin inbox automatically, so a subscriber who presses reply still reaches you. If you need to contact a subscriber directly, use the address shown in the subscriber list rather than replying to a newsletter.

Sending cannot be undone There is no preview, no test send and no recall. Once you click send, every active subscriber receives the email. Proofread the subject and content first. For anything important, send to yourself first by subscribing your own address, or draft the text elsewhere and paste it in.

Removing a subscriber Each row has a delete action. Deleting removes the person from the list permanently. If they may want to re-subscribe later, unsubscribing (rather than deleting) keeps their record and lets them restore their subscription using the link in any previous email.

5. Content Management

5.1 Khutbah Videos

Where to find it: Sidebar > Content > **Khutbah Videos** • </admin/khutbahs>

What it does: Maintains the library of recorded Friday sermons shown on the public Khutbah page. The dashboard counts how many are publicly visible.

Khutbah fields

Field	Guidance
Title *	The sermon title as shown to visitors.
YouTube URL *	The link to the video. It must be a complete, valid web address starting <code>https://</code> , for example <code>https://www.youtube.com/watch?v=XXXXXXX</code> . A bare video ID will be rejected.
Speaker	Name of the imam or guest speaker.
Category	Used to group and filter the library.
Delivered Date	The date the khutbah was given. Drives the ordering of the library.
Duration (minutes)	Length of the video, as a plain number.
Description	A summary or outline of the sermon.

Get the YouTube link right Copy the address from your browser while the video is playing, rather than using YouTube's "Share" button, which can produce shortened links. After saving, open the public Khutbah page and confirm the video actually plays — a private or deleted video will show a YouTube error inside the player even though the record saved successfully.

5.2 Pages and the Page Builder

Where to find it: Sidebar > Content > **Pages** • </admin/pages>

What it does: Creates the free-form pages of the website. Each page has a slug (the part of

the address after the domain), optional search-engine metadata, and content assembled from **blocks** in the Page Builder.

Page fields

Field	Guidance
Title *	The page heading and the name shown in the admin list.
Slug (URL) *	The web address, using lowercase letters, numbers and hyphens only — for example <code>our-services</code> produces <code>ipswichmosque.org/our-services</code> . No spaces, no leading slash.
Excerpt	A short description used in listings and link previews.
Published	Controls visibility. An unpublished page returns "not found" to visitors but is kept in the admin list, so you can prepare a page in advance and switch it on later.
Meta Title	The title shown in search engine results. If blank, the page title is used.
Meta Description	The snippet shown under the title in search results. Aim for one or two sentences.

Reserved slugs Certain addresses are used by the website itself and cannot be given to a page, including `admin`, `login`, `register`, `storage`, `api`, `css`, `js`, `services` and `import`. If a slug clashes with an existing page you will be told it is already taken.

Opening the Page Builder

From the Pages list, choose **Builder** for the page you want to work on. The builder is where the actual content lives; the page record above only holds the title, address and metadata.

Block types

Content is built by stacking blocks in the order you want them to appear. Seven block types are available:

Block	Use it for
Hero	A large opening banner with a heading and supporting text. Usually the first block on a page.
Rich Text	Plain formatted text: paragraphs, headings, lists, links. The workhorse block.

Columns	Two, three or four columns side by side. See the detailed notes below.
Image	A single image with optional caption.
Image + Text	An image beside a block of text, on the left or right.
Repeater	A list of repeated similar items, such as a set of features or service highlights.
Download	A file visitors can download, presented with a button.

Using the Columns block

This is the most configurable block, and the one most often set up incorrectly.

Setting	Options
Column count	2, 3 or 4
	2 columns: 50/50, 60/40, 40/60, 70/30, 30/70
Layout (widths)	3 columns: 33/33/33, 50/25/25, 25/50/25, 25/25/50
	4 columns: 25/25/25/25, 40/20/20/20, 20/20/20/40
Gap (space between columns)	none, sm, md (default), lg
Vertical alignment	top (default), center, bottom, stretch
Heading	Optional heading printed above the columns

Stack columns on mobile Tick box, **on by default**. Keep it ticked — see below.

Each column can hold its own rich text and its own image, and you can choose whether that image sits above, below, left or right of the column's text.

- Stack columns on mobile — leave this ticked** With this option on, a two, three or four column layout collapses into a single column on phones and small tablets (below roughly 768 pixels wide), with each column taking the full width of the screen. This is what makes your layout readable on a mobile.
- If you untick it, the columns stay side by side on a phone. On a 360-pixel-wide screen a three-column layout gives each column about 110 pixels — text becomes unreadable and images turn into tiny strips. Only untick it for content that genuinely must stay side by side, and always check the result on an actual phone.

Using the Image + Text block

Setting	Options
Image position	left (default) or right
Image width	A percentage of the row; default 45
Vertical alignment	center (default), top, bottom
Gap	none, sm, md, lg
Rounded corners	On by default

Like columns, this block stacks automatically on phones: the image moves above the text and both take the full width.

Always check a page on a phone The builder looks correct on a desktop monitor even when the mobile layout is poor. After arranging columns or image-and-text blocks, open the live page on a phone — or narrow your browser window until it is phone-width — and confirm the content stacks sensibly and remains readable.

5.3 Carousel

Where to find it: Sidebar > Content > **Carousel** • </admin/carousel-slides>

What it does: Controls the rotating slideshow images at the top of a page, normally the homepage.

Slide fields

Field	Guidance
Page (slug) *	Which page this slide belongs to. Enter the page slug, for example <code>home</code> . Slides only appear on the page whose slug you enter here.
Order *	A number controlling the sequence. Lower numbers appear first.
Title *	The main heading overlaid on the slide.
Subtitle	Smaller supporting text under the title.
Button Text	Label for the call-to-action button, for example "Donate Now".
Button URL	Where the button leads. Use a full address for external sites, or a path such as

/donate for internal pages.

Image *

The slide background image. Required when creating a slide; when editing, leave it blank to keep the existing image.

Carousel image quality These images are displayed full-width at the top of the page, so they are seen larger than any other image on the site. Use a landscape image at least 1600 pixels wide. A small or portrait image will be stretched and blurred. Keep important content — faces, text, the mosque building — near the centre, because the title text is overlaid on top and the edges may be cropped on narrow screens.

5.4 Prayer Times

Where to find it: Sidebar > Content > **Prayer Times** • /admin/prayer_times

What it does: The daily prayer timetable shown in the header bar across the whole website, on the Prayer Times page, and on the prayer timing display screen. This is the most frequently consulted information on the site, so accuracy matters more here than anywhere else.

The timetable list

The list shows one row per day with columns for **Date**, **Day**, **Hijri**, then each prayer: **Fajr**, **Sunrise**, **Zuhr**, **Asr**, **Maghrib** and **Isha**. You can filter by month, search, and reset the filter.

Prayer time fields

Field	Guidance
Month *	The month this row belongs to.
Date (1-31) *	Day of the month, as a number.
Day *	Weekday name.
Hijri date / month / year	Optional Islamic calendar date shown alongside the Gregorian date.
Begins and Jama'at	Each prayer has two times: Begins (when the prayer time starts) and Jama'at (when congregational prayer is held at the mosque). Applies to Fajr, Zuhr, Asr, Maghrib and Isha.
Sunrise	A single time — sunrise has no jama'at.

Begins versus Jama'at Visitors rely on the **Jama'at** time to know when to attend the mosque, and on **Begins** to know when the prayer time has entered. Do not put the same value in both unless that is genuinely correct, and never leave Jama'at blank for a prayer the mosque holds in congregation.

Bulk import — the fast way to load a year

Rather than typing 365 rows by hand, use **Import** to upload a year of timetables from spreadsheets.

Requirement	Detail
Number of files	Exactly 12 — one for each month.
File naming	Each filename must contain the three-letter month abbreviation: Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, Dec. Examples: Jan.xlsx, Feb.xls, Mar.csv.
Supported formats	.xlsx, .xls, .csv
Content	Each file holds the prayer times for that one month.

As you select files the screen shows a count and a list of what you have chosen, so you can confirm you have all twelve before uploading.

Import deletes all existing prayer times first The import screen states plainly: *"Existing prayer times will be deleted before import."* This is a full replacement, not an addition, and it applies to **every month**, not just the months you are updating.

Consequences to be aware of:

- If the import fails part-way — wrong file format, a missing month, a misnamed file — you can be left with gaps in the timetable that visitors will see immediately.
- You cannot import a single month on its own. You must supply all twelve.
- Manually corrected individual days will be overwritten.

Before importing: keep a copy of the current timetables, check all twelve files are correctly named and openable, and confirm each contains the right month's data.

After importing: open the public Prayer Times page and check several dates across different months before you consider the job finished.

5.5 Quick Links

Where to find it: Dashboard > **Quick Links** • </admin/quick-links>

What it does: Manages the coloured shortcut tiles on the homepage that let visitors jump straight to popular destinations.

Quick link fields

Field	Guidance
Title *	The label on the tile, for example "Khutbah Videos". Keep it to two or three words.
Description	Short supporting text under the title.
URL *	Where the tile leads. Use a path such as <code>/khutbah</code> for site pages, or a full address for external sites.
Icon Type *	<code>SVG Icon (Built-in)</code> — choose from the mosque's own icon set; or <code>Custom Image Upload</code> — supply your own image.
Select Icon *	Only when using a built-in icon. Available: <code>Book (Khutbah)</code> , <code>Heart (Duas)</code> , <code>Building (Principles)</code> , <code>Link (Generic)</code> .
Upload Image	Only when using a custom image. Use a square image so it is not distorted.
Color Theme *	Sets the tile background. Available: <code>Green</code> , <code>Blue</code> , <code>Amber</code> , <code>Red</code> , <code>Purple</code> , <code>Indigo</code> .
Sort Order	A number controlling the sequence. Lower numbers appear first.

Match icon type to the field you fill If you choose `SVG Icon (Built-in)`, you must select an icon from the list; the image upload is ignored. If you choose `Custom Image Upload`, you must provide an image; the icon selection is ignored. Mixing these up is the usual reason a tile appears without a picture.

5.6 Menu Management

Where to find it: Sidebar > Settings > **Menu Management** • </admin/menu-items>

What it does: Controls the main navigation bar at the top of every page — both the desktop menu and the mobile menu. This is how you decide what visitors can click to reach each part of the site.

How the menu is structured

The menu has two levels:

- **Top-level items** — appear in the main navigation bar. These are items with no parent.
- **Dropdown sub-items** — items that have a parent. They appear inside a dropdown that opens when a visitor points at or taps the parent. A parent that has sub-items is not itself a clickable link; it opens the dropdown instead.

The admin list shows this hierarchy directly: top-level items are listed first, with their sub-items indented underneath.

Menu item fields

Field	Guidance
Title *	The words shown in the menu, for example "Marriage (Nikah)". Keep it short — long titles crowd the navigation bar and wrap awkwardly on phones.
URL	Where the item leads. Use a path such as <code>/services/marriage</code> for site pages, or a full address starting <code>https://</code> for external sites. Leave blank for an item that only exists to open a dropdown.
Parent Item	Optional. Selecting a parent turns this item into a dropdown sub-item. Leaving it as <code>-- None (Top Level) --</code> makes it a main menu item. Every top-level item in the system is offered here, each labelled with its group, for example "Our Services (Services)".
Sort Order	A number controlling the sequence within its level. Lower numbers appear first (leftmost on desktop).
Active	Off switches the item from the navigation without deleting it. Use this to hide a page temporarily.
Open in new tab	Makes the link open in a new browser tab. Use only for external sites; opening internal pages in new tabs is disorienting for visitors.

Creating a dropdown — the two-step process

1. Create the parent first, for example a top-level item titled **Our Services**. You may leave its URL blank, since a parent with sub-items opens the dropdown rather than navigating anywhere.

2. Create each child, for example **Marriage (Nikah)**, and in **Parent Item** select **Our Services**. Give the child a URL.

Repeat step 2 for every item you want in that dropdown. Only one level of nesting is supported: a sub-item cannot itself have children.

Do not set an item as its own parent The edit screen deliberately excludes the item you are editing from its own parent list, so you cannot create a loop. If a dropdown ever appears empty or behaves strangely, check whether the intended parent is still **Active** — an inactive parent hides its whole branch from the navigation.

Only active items are shown The public navigation shows only items whose **Active** switch is on. When you create a new item the switch is on by default, but if an item you added is missing from the menu, that is the first thing to check.

6. Courses and Events

6.1 Courses

Where to find it: Sidebar > Courses & Events > **Courses** • </admin/courses>

What it does: Manages the course sections advertised on the website, such as Quran classes, Arabic lessons or Islamic studies programmes.

Course fields

Field	Guidance
Title *	The course name, for example "Quran Classes for Children".
Subtitle	A short supporting line, for example the age range or the day it runs.
Page	The page this course section belongs to.
Slug	The address segment for this course.
Sort Order	A number controlling the sequence. Lower numbers appear first.

Courses also support additional detail through related sections and features, which are managed from the course's own screens.

6.2 Events

Where to find it: Sidebar > Courses & Events > **Events** • </admin/events>

What it does: Maintains the list of upcoming events shown to visitors.

Event fields

Field	Guidance
Title *	The event name.
Date & Time *	When the event takes place. Choose both the date and the time.
Location	Where it is held. Include enough detail for someone visiting for the first time.
Description	What the event involves, who it is for, and whether registration is needed.

Sort Order A number controlling the sequence. Lower numbers appear first.

Past events Events are listed by date, so old events drift down rather than disappearing. Review the list periodically and remove events that have already taken place, so the listing does not give the impression that the mosque's programme has stalled.

6.3 Ramadan

Where to find it: Sidebar > Courses & Events > **Ramadan** • </admin/ramadan>

What it does: Drives the whole Ramadan hub page: the countdown, the daily sehri and iftar timetable, Eid details, iftar sponsorship information and Ramadan events. Because Ramadan is the busiest period of the mosque's year, this is one of the most important modules to prepare carefully and in advance.

How it is organised

Ramadan is set up **one year at a time**. Each year is a separate record with its own start date, timetable and events. The list shows each year with its title, start date, timetable image, and counts of how many daily times and events have been entered, so you can see at a glance whether a year is complete.

From a year's record you can reach:

- **Edit Settings** — the year's general details (below).
- **Manage Daily Times** — the day-by-day timetable.
- **Manage Events** — events held during Ramadan.
- **View** — a preview of the year's details.

Ramadan settings fields

Field	Guidance
Start Date *	The first day of Ramadan for this year. Drives the countdown on the public page.
Countdown Target	The exact date and time the on-page countdown counts down to. Set this to match the start date, or to the first iftar if you prefer.
Fitrana Amount *	The Fitrana amount for the year, for example 5.00.
Eid Jamat Times *	The Eid congregation times. Enter all the times the mosque holds Eid

prayer, since visitors plan their morning around this.

**Isha & Taraweeh
Note ***

Guidance about Isha and Taraweeh during Ramadan — timings, arrangements, or anything visitors should know.

Hero Message The large welcome message at the top of the Ramadan page.

Section title / Intro
message Heading and introductory text for the main content section.

Timetable Image The sehri and iftar timetable as an image (JPG or PNG). Often easier for visitors to read than a table.

Sponsor / arrange
iftar text Invitation text encouraging members to sponsor an iftar.

Cost for one day Iftar
(£) The amount it costs to provide iftar for one day.

Contact Who to contact about iftar sponsorship — a name, phone number or email.

Iftar contribution
items The ways members can contribute to iftar.

Ramadan events fields

Field	Guidance
Event Title *	The name of the event.
Event Date *	The date it takes place.
Location	Where it is held.
Start Time / End Time	When it begins and finishes.
Description	What the event involves.

Prepare Ramadan well before the month begins Visitors start checking the Ramadan page weeks in advance, and the countdown is visible before the month starts. Complete the settings, the full daily timetable and the events early, then review the public page on both a desktop and a phone.

Pay particular attention to **Eid Jamat Times**. These are checked heavily on the night before Eid, and an error or omission causes immediate confusion at the mosque door. Confirm them with the imam before publishing.

Timetable image legibility If you upload the timetable as an image, remember that visitors will read it on phones. A dense spreadsheet screenshot becomes unreadable when shrunk to phone width. Either use a large, clear image designed for reading, or enter the daily times as records so the page can present them as a proper table that reflows on small screens.

7. Religious Content

7.1 Jummah

Where to find it: Sidebar > Religious > **Jummah** • </admin/jummah>

What it does: Sets the Friday khutbah and salah times shown across the website. Unlike prayer times, these are scheduled for a period rather than day by day.

Jummah schedule fields

Field	Guidance
Effective From *	The date this schedule starts applying.
Effective Till	The date it stops applying. Leave blank for an open-ended schedule that continues until a newer one begins.
Khutbah Time (HH:MM)	When the sermon begins, in 24-hour format, for example 13:00.
Salah Time (HH:MM)	When the congregational prayer begins, for example 13:30.
Note	Optional note shown alongside the times — for example "Second jama'at at 14:15" or a seasonal change.
Status *	Whether this schedule is in use.

How the date ranges work The website shows the schedule that is current on today's date. To change Friday times going forward, create a **new** schedule with the future **Effective From** date rather than editing the current one. The current schedule then remains correct until the new one takes over automatically, and you keep a history of past timings.

If you set **Effective Till**, make sure a later schedule exists to cover the following period — otherwise the site may show no Friday times at all.

7.2 Duas

Where to find it: Sidebar > Religious > **Duas** • </admin/duas>

What it does: Maintains the library of supplications available to visitors, searchable and grouped by category.

Dua fields

Field	Guidance
Category *	Which category the dua belongs to. Categories are managed separately in Duas Category (section 7.3) — create the category first if you need a new one.
Title *	The name of the dua, usually describing when it is recited, for example "Before Eating".
Arabic *	The Arabic text. Ensure the text is accurate and check how the right-to-left script displays after saving.
Pronunciation	Optional transliteration for those who cannot read Arabic script.
Translation *	The English meaning.
Keywords	Optional extra words that help visitors find the dua when searching.

Accuracy of religious text The Arabic text, transliteration and translation are religious content that members of the community rely on for worship. Have them checked by someone qualified before publishing, and proofread carefully after saving — the editor does not verify Arabic script, and a misplaced diacritical mark can change a meaning.

7.3 Duas Category

Where to find it: Sidebar > Religious > **Duas Category** • /admin/dua_categories

What it does: Defines the groupings used to organise the dua library, such as "Morning and Evening", "Before Meals" or "Travel".

Category fields

Field	Guidance
Name *	The category name shown to visitors.

Sort Order A number controlling the sequence. Lower numbers appear first.

Create categories before duas A dua must be assigned to a category, and the dropdown only offers categories that already exist. If you are starting a new area of the library, set up its categories here first, then add the duas.

8. Services

8.1 Marriage Bookings

Where to find it: Sidebar > Services > **Marriage Bookings** • </admin/marriage-bookings>

What it does: Records enquiries from families wishing to hold a Nikah ceremony or reception at the mosque, and lets you track each one through to completion.

How enquiries now reach you The Nikah services page no longer carries its own booking form. Visitors are directed to the mosque's **Contact** page instead, where they can enquire about a Nikah booking. Practical consequences:

- Nikah enquiries may now arrive as **contact messages** (section 9.1) rather than as marriage booking records. Check both places.
- Existing marriage booking records remain fully viewable here, and you can still update their status.
- Because enquiries can arrive in either module, agree within the committee who checks what, so a family is not left waiting.

The bookings list

Each row shows **Name, Email, Phone, Proposed Date, Guests, Service, Status, Created** and a **Read** indicator. Unread enquiries are highlighted so new ones stand out, and the dashboard shows a count of pending requests.

Processing a booking

1. Open the enquiry from the list to see the full details, including the requested service type and any additional requirements the family wrote.
2. Mark it as read so it no longer appears as new.
3. Contact the family to discuss availability and arrangements.
4. Update the **Status** as the enquiry progresses.

Status values

Status	Meaning
--------	---------

Pending Newly received and not yet dealt with. This is the default.

Confirmed The date and arrangements are agreed with the family.

Cancelled The booking will not go ahead. A cancellation reason may be recorded.

Completed The ceremony has taken place.

Service types

An enquiry may be for **Nikah Only**, **Reception Only**, or **Nikah & Reception**. This tells you whether the family needs the hall and catering arrangements as well as the imam.

Respond promptly Families planning a Nikah are often working to a fixed date and will contact several venues. An enquiry left as **Pending** for days may be lost. Aim to acknowledge every enquiry within one or two working days, even if only to say you are checking availability.

8.2 Funeral Bookings

Where to find it: Sidebar > Services > **Funeral Bookings** • </admin/funeral-bookings>

What it does: Records requests for Janazah (funeral) services. These are time-critical and should be treated as the highest priority in the panel.

Processing a request

The workflow matches marriage bookings: open the request, mark it read, contact the family, and update the status using the same four values — **Pending**, **Confirmed**, **Cancelled**, **Completed**.

Funeral requests are urgent Islamic practice calls for burial to take place as soon as possible, often within a day or two. A family submitting a funeral request is usually in distress and under immediate time pressure. Check this screen daily — ideally more than once — and make sure someone covers it at weekends. Do not let a request sit in **Pending**.

8.3 Janazah Content

Where to find it: Sidebar > Services > **Janazah Content** • </admin/janazah-contents>

What it does: Manages the guidance content on the public Janazah page: the funeral rites,

how to perform the Janazah prayer, and the terms and conditions for using the mosque's funeral service. This is separate from the booking requests in 8.2.

Section types

Each record belongs to one of seven sections. Understanding this structure is the key to using the module:

Section	What it holds
Hero / Intro	The opening introduction of the page.
Funeral Rites (Section Title)	The heading and subtitle for the rites section.
Funeral Rite Step	One individual step of the funeral rites. Each step is its own record, shown as a card on the page.
Janazah Prayer (Section Title)	The heading and subtitle for the prayer section.
Janazah Prayer Step	One individual step of the Janazah prayer (Hanafi Madhhab). Each step is its own record.
Terms & Conditions (Main)	The main terms text.
Terms & Conditions (Point)	One individual point within the terms.

Content fields

Field	Guidance
Section *	Choose from the seven sections above. This determines where the record appears on the page.
Title *	The heading for this item, for example the name of a rite step.
Content *	The body text, written in the rich text editor.
Sort Order	A number controlling the sequence within its section. Lower numbers appear first. Set these carefully — the rites and prayer steps must appear in the order they are performed.
Visible	Controls whether the item shows on the public page.

Order matters here more than anywhere The rites and prayer steps are displayed in **Sort Order** sequence, and people follow them step by step while performing the rites. If you add a new step, check the sort order of the steps around it and confirm on the public page that the sequence still reads correctly from first step to last.

8.4 Emergency Contacts

Where to find it: Sidebar > Services > **Emergency Contacts** • </admin/emergency-contacts>

What it does: Publishes a list of committee members who can be contacted directly — typically the people a family should call about a funeral or an urgent mosque matter.

Contact fields

Field	Guidance
Name *	The person's name.
Role in Committee *	Their position, for example Secretary, Treasurer or Janazah Coordinator. Visitors use this to work out who to call.
Phone Number *	The number to publish. Write it in the form you want displayed.
Sort Order	A number controlling the sequence. Lower numbers appear first.
Status	Visible or Hidden. Use Hidden to withdraw a contact without deleting the record.

These numbers are published publicly Anyone visiting the website can see this list, and the numbers may be called at any hour during a bereavement. Only add numbers where the person has agreed to be contacted publicly. Review the list whenever the committee changes, and set a departing member to Hidden immediately — an out-of-date emergency number is worse than none, because it delays a family at the worst possible moment.

9. Management

9.1 Contact Messages

Where to find it: Sidebar > Management > **Contacts** • </admin/contacts>

What it does: Holds every message submitted through the public Contact page. Since the Nikah booking form was removed from the services page, this is now also where marriage and general service enquiries arrive — making it one of the screens to check most often.

Handling a message

1. Open the message from the list to read it in full, together with the sender's name, email address and subject.
2. Reply to the sender by email from your own mail program, using the address recorded on the message.
3. Keep the message in the list as a record of the conversation.

Contact messages are created by members of the public, so they are read-only in the panel: you can view them, but you do not edit their content.

What the visitor experiences When someone submits the contact form they receive an automatic acknowledgement thanking them for contacting the mosque, and the committee receives a notification email. The notification is set up so that pressing **Reply** responds directly to the person who wrote in — their name and address appear as the sender — so you can answer straight from your inbox.

Do not rely on email notifications alone Email notifications can be missed, filtered to spam, or lost if the mosque mailbox has a problem. Log into the panel and read the contact list directly, rather than treating the notification emails as the only record. Messages that arrive by email but not in the panel — or vice versa — indicate a mail delivery problem worth investigating.

9.2 People Directory

Where to find it: Sidebar > Management > **People** • </admin/people>

What it does: Maintains the committee and team members listed on the public "Our Team" page.

Person fields

Field	Guidance
Name *	The person's full name.
Role *	Their position, for example Chairperson, Secretary, Treasurer, Asst. Secretary or M/C Member. Shown under their name on the page.
Phone	Optional contact number.
Email	Optional email address.
Image URL	Optional web address of a photograph.

How the team page now displays The public "Our Team" page presents committee members as a **text list** rather than a grid of photographs: each person appears as a row showing their name and role, with their email address and phone number alongside as clickable links. Visitors can therefore email or call a committee member directly from the page.

Because the list is displayed alphabetically by name, the **Image URL** field is no longer shown on the public page. It remains available in the panel and any existing values are untouched, so photographs can be reinstated later without re-entering them. If you want the public page to show photographs again, ask whoever maintains the website.

Personal data is published Any email address or phone number you enter here is published on the open website and can be read by anyone, including automated programs that harvest addresses for spam. Only publish contact details the person has agreed to make public. Consider using a shared role address — for example the Secretary's role mailbox — instead of a personal one.

9.3 Donations

Where to find it: Sidebar > Management > **Donations** • </admin/donations>

What it does: Shows every donation taken through the website, both one-off gifts and recurring subscriptions, together with summary totals. There is also a separate **Statistics** view for reporting.

What the screen shows

Area	Detail
Donation Records	The main table, one row per donation, with columns for Date , Donor , Amount , Type , Frequency , Category , Status and Gift Aid .
One-off Donations	Summary of single gifts.
Regular Donations	Summary of recurring gifts.
Active Subscriptions	The recurring donations currently running, with a Manage Subscription action on each.
Gift Aid Total	The total Gift Aid claimed or claimable across donations.

Finding a specific donation

The list can be narrowed using the filters at the top:

- **Search** — by donor name or reference.
- **All Types** — one-off or regular.
- **All Frequencies** — Monthly, Quarterly, Annually, or one-off.
- **All Categories** — the appeal or fund the donation was made to.
- **All Statuses** — see the table below.
- **From Date** and **To Date** — a date range, useful when reconciling against the bank statement for a particular month.

Donation statuses

Status	Meaning
Completed	The payment succeeded and the money has been taken.
Pending	The payment was started but not yet confirmed.
Failed	The payment did not go through — typically a declined card. The donor may need to try again.
Cancelled	The donor or an administrator stopped the payment or subscription.

Financial records — read carefully before acting Donation records reflect real money and real donors. Notes on this screen:

- Donation records are created by the payment system. Do not expect to edit an amount here — if a payment is wrong, it must be corrected through the payment provider and, if necessary, refunded there.
- A Failed or Cancelled regular donation means the mosque has stopped receiving that gift. Review these periodically: a supporter whose card expired may be happy to set up a new one if someone contacts them.
- The totals shown are drawn from these records. If a total disagrees with the bank statement, look for payments that are Pending or Failed, which appear in the list but did not result in money received.

Reconciling a month Set **From Date** to the first day of the month and **To Date** to the last day, set **All Statuses** to Completed, and add up the amounts. That figure is what should appear in the bank account for website donations during that month. Keep a note of any difference and investigate before the accounts are closed.

9.4 Gift Aid

Where to find it: Sidebar > Management > **Gift Aid** • </admin/gift-aid>

What it does: Records Gift Aid declarations from donors, allowing the mosque to reclaim the tax on qualifying donations from HMRC. This module includes a **Report** view for preparing claims.

What Gift Aid requires For the mosque to claim Gift Aid on a donation, the donor must have made a valid declaration confirming they are a UK taxpayer, and the mosque must hold their name and home address. A declaration that is missing an address, or that was made by someone who does not pay UK tax, cannot be claimed on — and claiming incorrectly creates a liability for the mosque. Treat this data with the same care as the accounts.

Declaration fields

Field	Guidance
Donor Name *	The donor's full name, as they would want it recorded for HMRC.
Email Address *	Must be a valid email address.

Full Address *	The donor's home address. Required for a valid claim.
Postcode *	The postal code of that address.
Phone Number	Optional contact number.
Declaration Date *	The date the donor made the declaration. Must be a valid date.
Declaration Text *	The wording of the declaration the donor agreed to. Do not alter this wording without taking advice, as it must meet HMRC requirements.
Notes	Internal notes that are not part of the declaration itself.

Using the Gift Aid report

The **Report** screen gathers declarations and their associated donations to support a claim. Before submitting anything to HMRC, check that each declaration has a complete name, full address and postcode, and that the declaration date is correct. A declaration can be cancelled if a donor withdraws it or tells you they no longer pay UK tax — record the cancellation rather than deleting the record, so you retain an audit trail.

Correctness matters Errors in Gift Aid claims can result in the mosque having to repay reclaimed tax. If you are unsure whether a declaration is valid, or whether a particular donor qualifies, check with the Treasurer or the mosque's accountant before including it in a claim. Do not guess at an address or a declaration date.

10. Administration

10.1 Admin Users

Where to find it: Sidebar > Settings > **Admin Users** • </admin/users>

What it does: Controls who can log into the Admin Panel.

The user list

Shows every administrator with their **Name**, **Email** and **Created** date, plus actions to **Edit**, reset a password, or delete the account.

User fields

Field	Guidance
Name *	The person's name.
Email *	The address they will log in with. Must be valid and not already used by another account.
Password *	Choose a strong password and give it to the person securely — not by plain email or text if you can avoid it.
Confirm Password *	Retype the password exactly. The two must match.

Resetting someone's password

Use the password action on their row in the list. This is the quickest way to help a colleague who is locked out, and does not require them to use the forgotten-password email flow.

Every admin account has full control There is no restricted or read-only level. Anyone who can log in can change prayer times, publish announcements to every subscriber, view donor and Gift Aid personal data, manage payments, and delete content — including deleting other admin accounts.

Therefore:

- Issue accounts only to trusted, current committee members.

- **Delete the account of anyone who leaves their role**, on the day they leave.

This is the single most commonly overlooked security step.

- Do not share one account between several people — you lose any record of who made a change.

- Review the user list at least twice a year and confirm each person still needs access.

Do not delete your own account Make sure at least two people hold admin access at all times. If the only administrator leaves and their account is removed, nobody can get back into the panel to create a new one.

10.2 Mosque Settings

Where to find it: Sidebar > Settings > **Mosque Settings** • </admin/mosque-settings>

What it does: Holds the mosque's core details, which appear throughout the website — in the header, the footer, on the contact page and on the donation page.

Setting groups

Group	Fields
Mosque identity	Mosque Name, Phone Number, Email Address, Address
Legal	Registered Charity No, Company No
Opening hours	Monday - Friday, Saturday, Sunday
Bank details	Account Name, Bank Name, Account Number, Sort Code
Branding	Mosque Logo, Favicon

These details appear everywhere The mosque name, address, phone number and email address are used across many pages at once — the header on every page, the footer, the contact page and the donation page. A single correction here fixes all of them, which also means a single mistake is repeated everywhere. Check the public site after saving.

Bank details are published on the donation page The Account Name, Bank Name, Account Number and Sort Code are shown to visitors so they can make a bank transfer. Verify all four against a bank statement before saving — a transposed digit sends donations to the wrong account and is very difficult to recover. Equally, do not enter any detail here that should not be public, such as a security number or online banking credentials. Only the four fields listed belong here.

Logo and favicon

The **Mosque Logo** appears in the header of every page; the **Favicon** is the small icon shown in the browser tab. If no logo is uploaded, the site falls back to a default image. Use a clear image with a transparent or plain background, since it is displayed against the site's header colours.

10.3 Stripe Settings

Where to find it: Sidebar > Settings > **Stripe Settings** • </admin/stripe-settings>

What it does: Connects the website to Stripe, the payment service that processes online donations. Without correct keys here, the donation page cannot take payments.

Fields

The screen holds three values, in two sets — one for **test** mode and one for **live** mode:

Field	Guidance
Publishable key	The public key. Begins <code>pk_</code> . Safe to expose to visitors' browsers.
Secret key	The private key. Begins <code>sk_</code> . Never share this.
Webhook secret	Begins <code>whsec_</code> . Lets Stripe tell the website when a payment or subscription changes state.
Mode	<code>test</code> or <code>live</code> . Test mode processes no real money; live mode takes real donations.

Handle this screen with great care

- **The secret key is equivalent to the mosque's ability to take money.**
Anyone who obtains it can process payments on the mosque's behalf. Never email it, never screenshot it into a document, and never enter it into any website other than this screen.

- **Do not mix test and live keys.** Using test keys in live mode means real donors see a payment form that never completes, and the mosque receives nothing. Using live keys in test mode may charge real cards unexpectedly.

- **If a key is ever exposed, revoke it in Stripe immediately** and paste in a replacement here.

- **This screen should be used by one or two named people only** — normally the Treasurer and the website maintainer.

Because a mistake here silently breaks all online giving, always make a test donation after changing anything, and confirm the money appears in the Donations list (section 9.3).

After any change to payment settings Switch to test mode, make a small test donation on the public donation page, and confirm it appears in **Donations**. Only then switch back to live mode and repeat with a real donation of a small amount, which you can refund. This two-step check catches nearly every configuration error before donors encounter it.

11. The Public Website

11.1 How the site is organised

Understanding where content appears helps you decide which module to edit. The table below maps each public area to the module that controls it.

Public area	Controlled by	Notes
Header prayer bar (every page)	Prayer Times (5.4)	The current day's times appear above the navigation on every page of the site.
Main navigation	Menu Management (5.6)	Only Active items appear.
Homepage slideshow	Carousel (5.3)	Slides show on the page whose slug you entered.
Homepage shortcut tiles	Quick Links (5.5)	Coloured tiles linking to popular pages.
Prayer Times page	Prayer Times (5.4)	The full monthly timetable.
Prayer timing display screen	Prayer Times (5.4)	A dedicated screen for display inside the mosque.
Notice Board	Notice Board (4.1)	Active, published and unexpired notices.
Newsletter archive	Newsletter (4.2)	Sent newsletters remain publicly viewable.
Khutbah page	Khutbah Videos (5.1)	The sermon video library.
Our Team page	People (9.2)	Committee list, alphabetical by name.
Services pages	Pages and Page Builder (5.2), Janazah Content (8.3)	Marriage, funeral and visit pages.
Ramadan page	Ramadan (6.3)	Countdown, timetable, iftar, events.
Duas page	Duas and Duas Category (7.2, 7.3)	Searchable supplication library.
Donate page	Mosque Settings (10.2), Stripe Bank details come from Mosque Settings;	

	Settings (10.3)	card payments from Stripe.
Contact page	Mosque Settings (10.2)	Messages arrive in Contacts (9.1).
Footer (every page)	Mosque Settings (10.2)	Name, address, contact details. Also holds the newsletter subscribe form.

11.2 Newsletter sign-up

Visitors can subscribe to the newsletter from the footer of every page and from the Notice Board page, entering their name (optional) and email address. They receive a confirmation message on the page. Subscriptions appear immediately in the Newsletter subscriber list (section 4.2).

Every newsletter carries a personal unsubscribe link. A person who unsubscribes can restore their subscription using the re-subscribe link in any previous email, provided their record was not deleted.

11.3 How visitors contact the mosque

There is one public contact route: the **Contact** page. Visitors submit a name, email address, subject and message, which arrives in **Contacts** (section 9.1). They receive an automatic acknowledgement, and the committee receives a notification email that can be replied to directly.

Service enquiries Enquiries about Nikah ceremonies are made through the Contact page, since the Nikah services page now directs visitors there rather than carrying its own form. Funeral service information and the committee contact numbers are published on the Janazah page and through **Emergency Contacts** (section 8.4).

11.4 Checking your work on the public site

Because most changes go live immediately, make a habit of looking at the real page after saving:

1. Open the public page in a new browser tab.
2. Refresh the page. If you still see the old content, press **Ctrl + F5** (Windows) or **Cmd + Shift + R** (Mac) to force a fresh copy — your browser may be showing a stored version.
3. Check the page on a phone, or narrow the browser window to phone width, to confirm the layout still works on small screens.
4. For anything time-sensitive — prayer times, Jummah times, Eid times — check two or

three different dates, not just today.

12. Troubleshooting and FAQ

12.1 Common problems and fixes

Problem	What to check
I saved a change but the website still shows the old content.	Force-refresh the page with Ctrl + F5 (Windows) or Cmd + Shift + R (Mac). Browsers store copies of pages to load them faster. If it still shows old content, check the record's Active , Published or Visible switch.
A menu item I added does not appear.	Check its Active switch is on (5.6). If it has a parent, check the parent is also Active — an inactive parent hides the whole dropdown.
A notice does not appear on the Notice Board.	Check three things: Active is on; Publish Date is today or earlier; Expiry Date is blank or in the future (4.1).
A page shows "not found" to visitors.	The page's Published switch is off (5.2). Turn it on.
A khutbah video will not play.	The YouTube link may be wrong, or the video may be private or deleted on YouTube. Re-check the address and the video's own privacy setting (5.1).
Prayer times are wrong or missing for a month.	Check whether a bulk import was run recently — import replaces all months and can leave gaps if a file failed (5.4). Verify the month's rows exist and have both Begins and Jama'at times.
No Friday times are showing.	No Jummah schedule covers today's date. Check the Effective From and Effective Till range and create a current schedule (7.1).
Columns look squashed or unreadable on a phone.	The block's Stack columns on mobile option is unticked. Tick it (5.2).
A quick link tile shows no icon.	Icon Type does not match the field you filled. Built-in icon requires selecting an icon; custom image requires uploading an image (5.5).

Carousel slides do not appear.	The slide's Page (slug) must exactly match the page's slug, including lowercase letters and hyphens (5.3).
Donations cannot be taken by card.	Stripe keys are missing, incorrect, or the wrong mode is selected. See 10.3 — and treat this as urgent, since it affects income.
A newsletter reported some failures.	Those addresses could not be delivered to — often closed or misspelled mailboxes. The rest were sent successfully. Failures are logged for review (4.2).
I cannot log in.	Check the email address and password carefully, including capital letters. Use Forgot your password? , or ask another administrator to reset it from Admin Users (10.1).
A form will not save.	Read the red message under each field. Usually a required field is blank, or a web address is missing https://, or an email address is invalid (2.6).

12.2 Frequently asked questions

Can I preview a change before visitors see it?

Generally no — saving makes the change live. The exceptions are modules with an **Active**, **Published** or **Visible** switch, and the **Publish Date** on notices, which let you prepare content and reveal it later. For anything else, prepare your text in a separate document first, then paste it in when you are ready.

Can I undo a change?

There is no undo. Editing a record overwrites the previous version, and deleting removes it permanently. For important content, keep your own copy of the original text before editing, so you can paste it back if needed.

How do I hide something without deleting it?

Use its visibility switch — **Active** (menu items, notices), **Published** (pages), **Visible** (Janazah content), or **Status: Hidden** (emergency contacts). This keeps the record intact for later.

Does changing the order require re-creating records?

No. Nearly every module has a **Sort Order** number. Lower numbers appear first. Change the numbers and save — you do not need to delete and re-add anything.

Who receives emails from the website?

Event	Who is emailed
Newsletter sent	Every active subscriber
Notice published with email option	Every active subscriber
Contact form submitted	The committee, and an acknowledgement to the sender
Marriage booking submitted	The committee
Funeral booking submitted	The committee

Bulk emails are sent from **no-reply@ipswichmosque.org**, with replies routed to the admin inbox. One-to-one emails, such as contact notifications, are set up so a reply reaches the person who wrote in.

Can several people work in the panel at the same time?

Yes, but there is no locking or merge facility. If two people edit the same record, whoever saves last overwrites the other's changes. Agree who is responsible for each module, and avoid two people editing the same record simultaneously.

Is anything backed up?

That is handled by whoever maintains the website hosting, not from within the panel. If you are adding substantial original content, keep your own copy of the text and images. Do not treat the Admin Panel as the only copy of important material.

12.3 When to ask for help

Contact whoever maintains the website rather than experimenting, if you need to:

- Change Stripe settings and are unsure about keys or modes.
- Recover deleted records, or fix content that has been overwritten.
- Change the website's design, layout or navigation structure beyond adding menu items.
- Reinstate photographs on the Our Team page.
- Investigate email that is not being delivered.
- Change the domain, hosting or any technical setting.

13. Appendix

13.1 Quick reference — every module at a glance

Module	Address	Main required fields
Notice Board	/admin/notices	Title, Category, Content
Newsletter	/admin/newsletter	Subject, Content
Khutbah Videos	/admin/khutbahs	Title, YouTube URL
Pages	/admin/pages	Title, Slug
Page Builder	/admin/pages/{page}/builder	Depends on block type
Carousel	/admin/carousel-slides	Page (slug), Order, Title, Image
Prayer Times	/admin/prayer-times	Month, Date, Day, prayer times
Prayer Times Import	/admin/prayer-times/import	12 files, one per month
Quick Links	/admin/quick-links	Title, URL, Icon Type, Icon, Color Theme
Menu Management	/admin/menu-items	Title
Courses	/admin/courses	Title
Events	/admin/events	Title, Date & Time
Ramadan	/admin/ramadan	Start Date, Fitrana, Eid Jamat, Isha & Taraweeh
Ramadan Events	/admin/ramadan/{ramadan}/events	Event Title, Event Date
Jummah	/admin/jummah	Effective From, Status
Duas	/admin/duas	Category, Title, Arabic, Translation
Duas Category	/admin/dua-categories	Name
Marriage	/admin/marriage-bookings	Read only (public submissions)

Bookings

Funeral Bookings	/admin/funeral-bookings	Read only (public submissions)
Janazah Content	/admin/janazah-contents	Section, Title, Content
Emergency Contacts	/admin/emergency-contacts	Name, Role in Committee, Phone Number
Contacts	/admin/contacts	Read only (public submissions)
People	/admin/people	Name, Role
Donations	/admin/donations	Read only (payment system)
Donation Statistics	/admin/donations/statistics	Read only
Gift Aid	/admin/gift-aid	Donor Name, Email, Address, Postcode, Declaration Date, Declaration Text
Admin Users	/admin/users	Name, Email, Password, Confirm Password
Mosque Settings	/admin/mosque-settings	Mosque identity and bank details
Stripe Settings	/admin/stripe-settings	Publishable key, Secret key, Webhook secret

13.2 Reference lists

List	Values
Notice categories	General, Prayer, Event, Announcement, Urgent
Booking statuses	Pending, Confirmed, Cancelled, Completed
Marriage service types	Nikah Only, Reception Only, Nikah & Reception
Donation statuses	Completed, Pending, Failed, Cancelled
Donation frequencies	Monthly, Quarterly, Annually (plus one-off)
Column layouts (2)	50/50, 60/40, 40/60, 70/30, 30/70

13.3 Publishing checklist

Use this before any significant change goes live.

✓ Check

- ☐ All **required** fields are filled in and the record saved without a red validation message.
- ☐ Spelling and grammar checked — remember there is no undo.
- ☐ Any dates are correct, including the year. Check Publish Date, Expiry Date, Effective From/Till and event dates carefully.
- ☐ Any times are in 24-hour format and correct — prayer, Jummah, Eid and event times.
- ☐ Any web addresses begin `https://` for external sites, or a leading `/` for site pages.
- ☐ Images are uploaded, in JPG or PNG, and large enough for where they are displayed.
- ☐ The visibility switch is set as intended (**Active** / **Published** / **Visible**).
- ☐ Sort order is correct relative to neighbouring records.
- ☐ The public page opened and checked on a desktop browser.
- ☐ The public page checked on a phone or at phone width.

- ☐ For bulk email: subject and content proofread, and you accept it goes to every subscriber immediately.
- ☐ For payments: a test donation completed successfully after any Stripe change.
- ☐ For personal data: only information the person has agreed to make public has been published.

13.4 Recommended routine

When	Do this
Every day	Check Funeral Bookings , Marriage Bookings and Contacts for anything new or still Pending .
Weekly	Add the week's Khutbah Videos . Review the Notice Board for notices that have expired or should be retired. Remove past Events .
Monthly	Load next month's Prayer Times . Reconcile Donations against the bank statement. Review Gift Aid declarations.
Before Ramadan	Complete the Ramadan settings, full daily timetable and events well in advance. Confirm Eid Jamat Times with the imam.
Twice yearly	Review Admin Users and remove anyone who no longer needs access. Verify Emergency Contacts are current. Check Mosque Settings — address, phone, bank details, opening hours.
When the committee changes	Update People and Emergency Contacts on the day the change takes effect. Remove the departing member's Admin Users account.

End of manual This manual describes the Admin Panel as it currently stands. If a screen you see does not match what is described here, the website may have been updated — contact whoever maintains it. Keep this document with the mosque's records and review it whenever significant changes are made to the website.
